Biometry is a research area that requires the concepts of life, mensuration and interpretation to be considered together and is located at the intersection of these concepts. Therefore, it includes making statistical estimations and inferences using life-related measurements. Journal of Biometry Studies (JofBS) is an international open access e-journal, which started its publication life in 2021 and is published twice a year (June and December), with the aim of bringing together scientific studies in the fields of biometry such as health, agriculture, forestry, wildlife, veterinary, aquaculture and fisheries. JofBS, which had presented 4 issues within 2 volumes to researchers, has published the first issue of the 3rd volume with its current issue.

To date, 27 articles from different countries (such as Türkiye, Philippines, Bangladesh, Malaysia, Ukraine) have been submitted to JofBS, including this issue, and as a result of reviewers' evaluations, 23 research articles and 2 review articles have been accepted and published, and 2 articles have been rejected. Published articles are in the fields of forestry, agriculture, fisheries, wildlife and health sciences.

JofBS follows the Double-Blind Peer Review process in article evaluation and all submitted articles are evaluated by at least two reviewers. Valuable comments of 59 reviewers from all over the world have been received to date, including the current issue of JofBS. The evaluation of the articles takes less than a month and the decision about the article is made as soon as possible after the review process.

All articles published in the JofBS are abstracted and indexed in various international indexes (please check the journal website, [www.biometrystudies.com](http://www.biometrystudies.com)).

We would like to thank all the authors, reviewers, associate editors, section editors, language editor, technical editors and publisher of JofBS. With their support, we have published the first issue of JofBS for the calendar year 2023 (Volume 3).
